

# Transfer Your Data (iPhone to iPhone)

**Step One:** Insert the SIM card into the new iPhone and power it on.

Make sure that Wifi and Bluetooth are enabled on your old iPhone (iOS 12.4 or later) and set it down on the home screen beside your new iPhone.

**Step Two:** Pair the iPhones

In the initial setup steps on the new iPhone there will be a prompt to sign in with your Apple ID on the old iPhone.

Press Continue

The new iPhone will show a screen with a swirling cloud of blue dots in a circle.

Your old iPhone will have a prompt to focus the camera on that cloud of dots on the new iPhone.

Answer any setup questions on the new phone (Passcode, Touch/Face ID, Apple ID password)

**Step Three:** Transfer Your Data

This screen should appear on the new iPhone. Tap Transfer from iPhone.

There will be some more setup questions to go through.

Note: The new iPhone may require a software update before the transfer can start.

Keep the iPhones close to each other during the transfer process.

## Set Up New iPhone

Use your Apple ID "j.appleseed@icloud.com" to set up your new iPhone.

Continue

## Transfer Your Data

You can directly transfer your data during setup, or finish downloading it later.

### Transfer from iPhone

Transfer directly so this iPhone will be ready with your data when you finish setting up.

Time to transfer: 5-10 minutes

### Download from iCloud

You can start using your iPhone in about 15 minutes. Your data will download later over Wi-Fi.
